

# Company Overview

## WHO IS DIZZION?

**A Cloud Services Company set on building the world’s fastest secure End User Cloud Computing Platform.**

### OUR MISSION: “Redefining the Way the World WORKS”

Dizzion was founded by technology veterans with an eye for innovation in Cloud services and “End User Computing” (EUC). EUC is shorthand for the belief that *a high-quality, secure end-user experience is of utmost importance and benefit to our customers.*

This unique focus has helped our customers and partners improve employee productivity while reducing and controlling costs. Our services are ideal for supporting large numbers of agents, meeting compliance regulations, and securing data access for remote employees, work@home programs and third-party contractors.

### OUR SERVICES & DIZZIONCARE

Dizzion is known for our high-performance user experience, service availability, dedicated support, and data security and management controls.

#### Subscription services include:

- Cloud Delivered Desktops (Desktops-as-a-Service)
- Cloud Burst - Disaster Recovery Desktops
- zAppstreaming – Cloud Delivered Applications
- zLink and zLink+ - Direct Desktop Access Endpoints

These services are all supported by **DizzionCare**, our commitment to providing customers and partners with full-time, dedicated technical infrastructure support. DizzionCare includes a round-the-clock helpdesk, full on-boarding support, ongoing strategic planning and a dedicated Client Account Team.

### A HIGH-GROWTH CLOUD BUSINESS

In the last year alone, we have more than doubled revenues, tripled employee count, moved to a larger headquarters, and opened a satellite office in San Antonio, TX. As one of the first companies to fully embrace the idea of EUC as a Go-To-Market strategy, we continue to add products, features, and services that solve customer challenges and help them grow their business.

### DIZZION QUICK FACTS

1. Founded in 2011 by Cloud veterans with over a decade of experience with End User Computing
2. Headquarters: Denver, CO, USA
3. Dizzion comes from “Digital Fission,” a re-imagining of the possibilities of the cloud, where data security and device freedom go hand-in-hand.
